

Features & Benefits

ReadyConference Plus

The PGI ReadyConference® Plus Advantage

Why shouldn't a conference call be as simple as picking up the phone? ReadyConference® Plus comes with a dedicated dial-in number and passcode for unlimited reservationless calling. With Web access features and cost-effective pay-as-you-go usage plans, ReadyConference® Plus is the most user-friendly conferencing service on the market.

Less Conference Call Clutter

Scheduling changes, multiple dial-in numbers and fluctuating passcodes can all prevent participants from making it to the right call at the right time. PGI

ReadyConference® Plus streamlines the connection process, saving you time and money — and making your calls more productive.

Greater Usability

Getting on your call is just the start. When it comes to getting the most out of your communications, count on

ReadyConference® Plus to offer an easy web interface with a variety of call management options and seamless compatibility.

Online Compatibility

Enhance participant audio interactions, upload and show presentations and more — all from our intuitive web interface.

ReadyConference® Plus is also fully compatible with [Netspoke web collaboration](#) and [PremiereCall event conferencing](#) products.

Unmatched Value

ReadyConference® Plus is the most cost-effective conferencing option available today. Pricing is based on usage, so you only pay for the minutes you use. And because ReadyConference® Plus is part of the Premiere Global Communications Operating System (PGiCOS), adding new tools is a breeze.

ReadyConference® Plus
